The DermaV laser is indicated for the treatment of vascular and pigmented lesions of the skin and permanent hair reduction on all skin types. Results may vary. Each patient's skin is different and you should consult your physician to see if a DermaV laser treatment is right for you.

How does the treatment feel?

You may experience mild discomfort throughout the treatment, which will vary depending on the condition of your skin and the area being treated. Your practitioner will work with you to ensure the procedure is as comfortable as possible.

How long does a treatment take?

Depending on the size and area to be treated, your session could last from 5-20 minutes.

What will happen after the treatment?

You may experience mild redness and puffiness immediately following the laser, but you should be able to return to normal activities right away. You can apply light makeup if desired. Don't forget your sun protection!

How long before I see results?

Some lesions may immediately disappear while others will take time to be broken down and removed by your body. Your skin will continue to regenerate and rejuvenate for several weeks. Your provider will work with you to determine the number of treatments you will need to achieve your desired results.

DERMAV™

AESTHETIC VERSATILITY

Tired of Seeing Red?

DermaV is incredibly efficient in reducing the appearance of redness, flushing and superficial veins.

Got Spots?

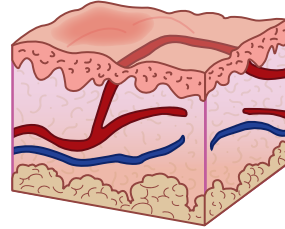

DermaV offers a comfortable, non-invasive treatment to eliminate unwanted pigment and achieve a bright, healthy-looking complexion on face, neck and décolletage.

Ready For the Skin You Deserve?

The unique Clear and Smooth™ treatment with IntelliTone™ technology comfortably delivers improved tone and texture to keep your skin looking and feeling amazing!

HOW DERMAV™ works

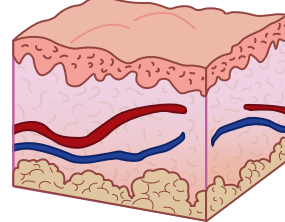

BEFORE

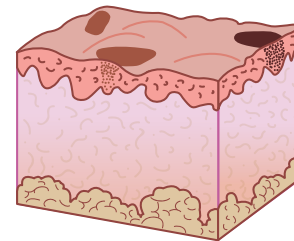

Vessels

DermaV applies laser energy that is absorbed by your blood vessels and converted to heat, which contracts and eventually eliminates them.

AFTER

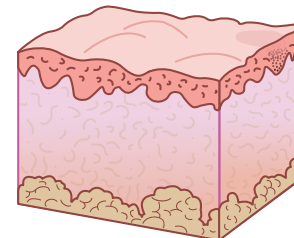

BEFORE

Pigment

Using controlled heating, DermaV's laser energy targets unwanted, visible pigment while protecting the top layers of your skin with patented cooling technology.

AFTER

WHAT CAN DERMAV™ TREAT?

Vascular lesions arise from natural sources including sun damage, genetics and the ageing process. DermaV is proven to treat a wide range of vascular conditions, including rosacea, facial veins, broken capillaries, and spider veins on the body, legs, and ankles.

Age spots, freckles, birthmarks and other types of benign pigmented lesions can occur naturally all over the body. They can vary in size, shape and prevalence in any given area. DermaV is proven to reliably reduce or eliminate unwanted pigment in all skin tones.

"I found the treatments to be pretty painless. My worst veins, the blue ones, are gone completely. The red ones disappeared quickly, too! Overall, I've had a very positive experience with DermaV."

— PATIENT PAG, NASHUA, NH
