

Liberate yourself from the ongoing need to shave and wax unwanted facial and body hair in order to feel and look your best!

With laser hair removal, all it takes is a few simple treatments to permanently minimise hair growth and reveal beautiful clear, silky skin that's ready to bare every day, all year long.

Unlike shaving that lasts only days, waxing that needs to be repeated every few weeks indefinitely, or electrolysis that's tedious, permanent laser hair reduction is a lasting solution that takes away the everyday hassle of dealing with unwanted facial and body hair.

The secret lies in the laser technology that targets and destroys hair cells responsible for hair growth without harming the surrounding skin. It's a simple approach to permanent hair reduction that's fast and FDA-cleared.

Make the Move to Permanent Hair Reduction. Vectus™ Laser Hair Removal is ideal for:

- Face
- Underarms
- Arms
- Legs
- Back
- Bikini Line
- Chest

Fall in love with the lasting results of laser hair removal!

Schedule your treatment session today – and be free of unwanted hair!

Ask your provider about Vectus – the fastest laser hair removal system from Cynosure.

Advantages of laser hair removal with the Vectus laser are clear:

- Excellent long-term results
- Fast treatment sessions that take only minutes
- Great for reducing hair for larger areas
- Comfortable treatments with no downtime

Best of all, treatment sessions take just minutes and are practically pain-free. It's the permanent hair removal solution you've been waiting for!

Frequently asked questions

What areas can be treated?

Permanent laser hair reduction can remove hair from faces (except around the eyes), backs, chests, arms, underarms, bikini lines and legs.

Am I a good candidate for this procedure?

Permanent laser hair reduction is available for all skin types, including very light and very dark skin and most hair colours. Your provider will determine if you are a good candidate for the procedure based on a variety of factors.

How does it work?

Laser energy is used to target and destroy hair follicles responsible for hair growth without harming surrounding tissue, so there's minimal risk.

How long does it take?

Permanent Laser hair reduction treatments take just a few minutes for small areas and about half an hour for larger areas.

How many treatments will I need?

Several treatment sessions are recommended for the best aesthetic outcome. Laser hair removal technology can only affect hair in active phases of growth, so several treatments are needed to affect all your unwanted hair. You do not need to let hair grow out between treatment sessions.

What will the treatment feel like?

Most people feel only a slight, momentary "snap" at the treatment site during the procedure.

How quickly will I recover?

You can resume regular daily activities immediately following treatment.

Are there any side effects?

Typically, most people experience a mild, sun-burn-like sensation, possibly accompanied by some minor swelling, immediately following treatment. This usually lasts 2 to 24 hours. Ask your provider to discuss other possible side effects and the necessary post-treatment care with you.
